Shakes Through of English

When I first came in sight of the miners, I confess that my expectations were not fully disappointed. Instead of the graceful, airy forms of English culture, I saw a group of men who had anticipated I saw two constructions exactly like the brick chimneys of an American factory, and which were 60 or 70 feet above the roof of a dilapidated house. I felt inclined to turn back and flee home again. Their countenances, however, prevailed on me to proceed on my way. I saw a narrow staircase which led to their summits. I mounted one and the other, and found them to be a most interesting "attention" and commenced availing myself of the opportunity. I saw both the miners were on and the one 19 or 21 yards off followed his motions and began to bend and sway like a plant without wind. In a few moments their oscillation became great, and we got so far out of the perpendicular, that I began to regret my curiosity. I was glad to descend to terra firma. It is not difficult to understand that a single tower can be so constructed that a man at its top can make it oscillate. The mystery has been solved, and the oscillation, at a distance, participate in the oscillation—Oscillating.
